

YESHA VIJAYKUMAR BHAVSAR

Marietta, GA | +1-470-549-1330 | ybhavsar2@students.kennesaw.edu | [LinkedIn](#) | [Portfolio](#)

Education:

Bachelor of Science in Computer Science | Kennesaw State University | GPA: 3.7/4.0; Dean's List, UPE Member May 2026

Coursework: Data Structures and Algorithm (DSA), Algorithm Analysis, Operating Systems, Database Management System (DBMS), Parallel & Distributed Computing, Software Architecture & Design, Cloud Software Development, Software Testing and QA, Artificial Intelligence (AI)

Skills:

Programming Languages: Java, Python, Kotlin, JavaScript, C/ C++, SQL | **Backend & APIs:** Spring Boot, FastAPI, Node.js, REST APIs

Cloud Platforms: AWS (EC2, S3, RDS, Lambda) | **Data & Managed Services:** Postgres, Supabase, Firebase, SQLite, FAISS | **Systems, Testing & DevOps:** Docker, Kubernetes, CI/CD Pipelines, Jira, Automated Testing, Unit Testing, Git, Asynchronous Processing, Validation Workflows, System Reliability | **Frontend:** React, TypeScript, HTML, CSS | **Core CS & Systems Concepts:** Object-Oriented Design, Distributed Systems, System Design, Cloud Architecture, Data Modeling | **AI Tools:** OpenAI APIs, GitHub Copilot, Cursor

Work Experience:

Software Engineer Intern

May 2025 – Jul 2025

LexisNexis Risk Solutions, Alpharetta, GA

- Designed and integrated QA Copilot, an **AI-powered evaluation system** to automate structured test-case generation across 8+ backend workflows, increasing test coverage by ~30% and reducing manual effort by ~40%.
- Designed and executed structured API validation tests across 50+ endpoints, ensuring consistent system behavior and identifying defects through systematic debugging and root cause analysis.
- Coordinated with cross-functional teams (engineering, QA, product) to align testing strategies, track issues, and ensure timely delivery of high-quality releases.
- Authored 15+ pages of structured technical documentation, including runbooks and system guides, enabling clear knowledge transfer, traceability, and long-term maintainability.
- Improved platform reliability and release quality by reducing defects introduced during configuration and deployment changes.

Projects:

Mindful Journaling App | [Live Link](#)

April 2026

- Built a **full-stack AI-powered platform** using Next.js and Supabase, enabling users to generate prompts and record reflections.
- Developed **structured workflows** for prompt generation, journaling, and **mood tracking**, enabling continuous user-AI interaction.
- Integrated **OpenAI APIs** for **context-aware prompt generation** and **sentiment analysis** to support personalized experiences.
- Designed **backend data models** to store and analyze user behavior, enabling **mood trend insights** and **feedback-driven improvements**.

AI Closet: Smart Outfit Recommendation System | [Live Link](#)

Jan 2026

- Designed and implemented a **responsive web interface** using React and TypeScript, building reusable UI components for consistent user interactions.
- Integrated **OpenAI multimodal vision models** to extract **semantic attributes** (category, color, style) from images, enabling automated data generation.
- Built a **hybrid inference pipeline** combining **AI-generated attributes** with **rule-based logic** to ensure **predictable and explainable outputs**.
- Architected a **modular system** separating **classification, inference, and personalization layers**, enabling scalability and workflow consistency.

Ticket Management System | [Live Link](#)

Dec 2025

- Designed and built a full-stack transactional system supporting ticket purchases, order confirmation, and customer-facing workflows with a focus on **reliable and consistent system behavior**.
- Implemented event-driven backend processing and resolved system inconsistencies through systematic debugging and root cause analysis, improving reliability of order lifecycle workflows.
- Integrated transactional email workflows with authenticated domains (SPF, DKIM, DMARC), ensuring **reliable delivery and validation of customer communication workflows**.
- Architected backend workflows to decouple user actions from system side effects (email, notifications), improving system resilience, maintaining **clear workflow boundaries**, and preventing user-facing latency during checkout flows.

LearnBot: Retrieval-Augmented AI Learning Assistant | [Live Link](#)

Nov 2025

- Designed and built a backend service that ingests documents, generates embeddings, and serves semantic retrieval via REST APIs, ensuring **accurate and context-aware responses**.
- Implemented a **retrieval-augmented generation (RAG) pipeline** with structured retrieval and evaluation logic to ensure **consistent and reliable outputs**.
- Built an end-to-end data pipeline for ingestion, embedding generation, and inference, with structured data handling to support **repeatability and system transparency**.
- Applied clean API design, environment-based configuration, and Swagger validation to improve **service reliability, debuggability, and correctness of outputs**.
