# YESHA BHAVSAR

Full-Stack Developer · Web Applications, Backend Systems & Applied AI
Atlanta, GA | 470-549-1330 | yesha.bhavsar02@gmail.com | LinkedIn | GitHub | Portfolio

## SUMMARY

Full-stack web developer with a B.S. in Computer Science from Kennesaw State (3.75 GPA). I build web apps end to end, from React and Next.js interfaces to REST APIs, databases, and cloud deployment, and I work hands-on with LLM and RAG systems. I have built and deployed four live apps, including a Kafka-based order platform, a RAG learning assistant, and a secure uptime monitor.

## TECHNICAL SKILLS

**Languages:** Python, Java, TypeScript, SQL, JavaScript, C/C++, Kotlin
**Frontend:** React, Next.js, HTML5, CSS3, Tailwind CSS, Responsive Design
**Backend:** FastAPI, Spring Boot, Node.js, REST APIs, Microservices, Kafka, Event-Driven Architecture, System Design, OAuth/JWT
**Cloud & Databases:** AWS (EC2, S3, RDS, Lambda), PostgreSQL, MySQL, SQLite, Supabase, Firebase
**AI & Data:** RAG Pipelines, LLM APIs (OpenAI, Gemini), Embeddings, FAISS, Vector Search, Prompt Engineering
**DevOps & Testing:** Docker, Kubernetes, GitHub Actions, CI/CD, Prometheus, Grafana, Git, JUnit, PyTest, Vitest, Postman

## EXPERIENCE

**Software Engineer Intern** | *ElderFort, Alpharetta, GA* **Oct 2026 – Present**

- Configured a local AI stack with Docker, Ollama, AnythingLLM, and Flowise, resolving container, storage, and dependency issues.
- Built a document Q&A workflow with PDF ingestion, chunking, local embeddings, and vector search for source-referenced answers.
- Benchmarked Llama 3.2 and Qwen 2.5 on accuracy, policy interpretation, and calculations, tracing errors to retrieved passages.

**Software Engineer Intern** | *LexisNexis Risk Solutions, Alpharetta, GA* **May 2025 – Jul 2025**

- Led design and integration of an AI-powered QA Copilot that generates test cases for **8+ backend workflows**, raising test coverage **~30%** and cutting manual test-authoring time **~40%**.
- Integrated the Copilot into Spring Boot, partnering with QA and engineers so generated tests matched production flows.
- Automated REST API validation for **50+ endpoints** in Postman, catching configuration regressions before Jira-tracked releases.
- Authored **15+ pages** of docs, runbooks, and handoff guides so QA and platform teams could own the Copilot after I left.

## PROJECTS

**FlowCommerce: Distributed Order Processing** | *Python, FastAPI, Kafka, PostgreSQL, Stripe, React* Live Demo

- Architected **7** FastAPI microservices on Kafka with saga choreography, sustaining **173 orders/sec** across **17K+** load-test requests.
- Prevented lost writes and double-charges under at-least-once delivery with a transactional outbox and idempotent consumers.
- Proved saga rollback with live Stripe payments at a **20%** failure rate: **0 lost** orders, **0 duplicates**, **100%** of held inventory released.
- Added Prometheus/Grafana metrics, correlation-ID tracing, an admin operations console, and an AI copilot for incident triage.

**LearnBot: RAG-Powered Learning Assistant** | *FastAPI, FAISS, Gemini, Supabase, AWS S3* Live Demo

- Delivered a **13-endpoint** FastAPI backend that turns PDFs and web pages into source-cited answers, quizzes, and flashcards.
- Indexed documents as overlapping chunks with **3,072-dim** Gemini embeddings in FAISS; retrieval returns the top 50 matches in **under 10 ms (p95)** on a **10K-vector** index, then narrows to 6 cited passages.
- Secured multi-user data with per-user vector isolation, Supabase JWT auth, and storage across S3, Supabase, and SQLite.

**PulseCheck: Website & API Uptime Monitor** | *Next.js, TypeScript, Supabase, PostgreSQL, Vitest* Live Demo

- Shipped a full-stack monitor that health-checks websites and APIs **every 10 minutes**, tracking uptime, HTTP status, and latency.
- Cut alert noise with an incident state machine that opens after two consecutive failures and auto-resolves on recovery.
- Hardened user-submitted URL checks against **SSRF** with DNS validation, private-network blocking, redirect revalidation, timeouts, and PostgreSQL Row Level Security.
- Implemented **10 REST API routes** with **32 Vitest tests** covering monitors, URL security, uptime math, and incident recovery.

**AI Closet: Outfit Recommendation Engine** | *Next.js, TypeScript, OpenAI Vision, Tailwind CSS* Live Demo

- Built a scoring engine ranking outfits on **12 weighted features** (color harmony, weather, style, feedback), tested on **600** outfits.
- Used OpenAI Vision to auto-tag category, color, and style from photos, plus live weather data for context-aware picks.

## EDUCATION & CERTIFICATIONS

**B.S. Computer Science** | *Kennesaw State University, Kennesaw, GA* **May 2026**

GPA: 3.75/4.0 · Upsilon Pi Epsilon (UPE) Computing Honor Society
**Coursework:** Data Structures & Algorithms, Operating Systems, Database Systems, Parallel & Distributed Computing, Software Architecture & Design, Cloud Software Development, Artificial Intelligence, Machine Vision
**Certifications:** Google AI Professional Certificate (Jul 2026) [Credential] · Meta Front-End Development (Aug 2026) [Credential]
